Adding a Canon Printer to a Mac
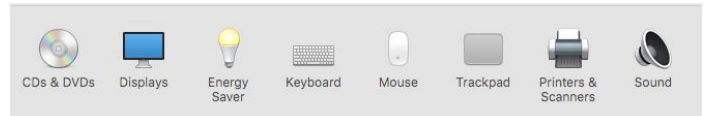

Find the Canon printer for your building in the spreadsheet at:
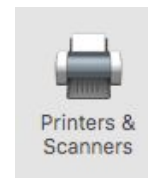

https://goo.gl/ReSF5N
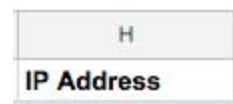

Open System Preferences
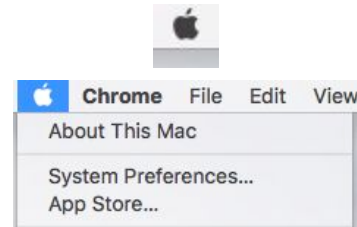

Go to Printers & Scanners

Select the + in the bottom left.
Select Add Printer or Scanner...

In the Add window, select IP in the top Right

In the spreadsheet you opened in Step #1:
Locate the IP Address for the printer you want to install from Column H.

Type the IP address into the Address field in the Add window.

Change the Protocol to HP Jetdirect - Socket
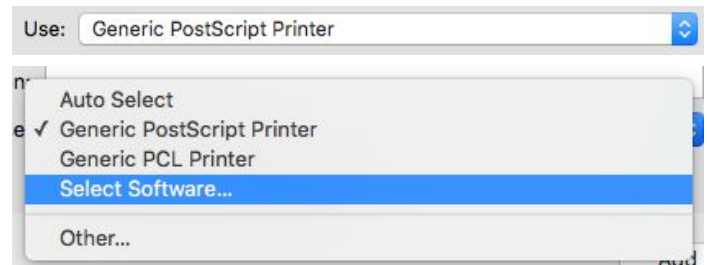

Update the Name field to help you identify the printer.

Select the correct Software

Use: Generic PostScript Printer
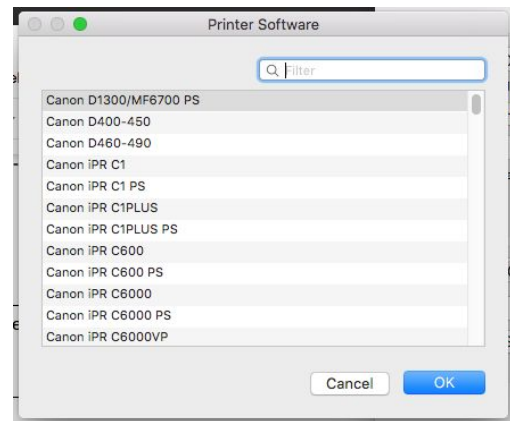

Auto Select
✓ Generic PostScript Printer
Generic PCL Printer
Select Software...

Other...

In the Printer Software window Filter by Canon Model Number (found on the spreadsheet from Step #1, Column F). If given, select the option that ends with PS.
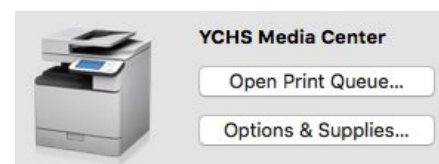

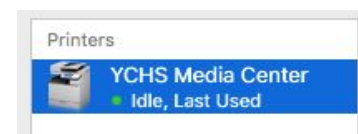

Printer Software

Q Filter

Canon D1300/MF6700 PS
Canon D400-450
Canon D460-490
Canon iPR C1
Canon iPR C1 PS
Canon iPR C1PLUS
Canon iPR C1PLUS PS
Canon iPR C600
Canon iPR C600 PS
Canon iPR C6000
Canon iPR C6000 PS
Canon iPR C6000VP

Cancel   OK

▶   F
Canon Model
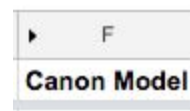

Verify the correct option for you building (it may differ from this image).

Use: Canon iR-ADV 8585/8595 PS

Select Add

Add

In the Printers & Scanners Window, highlight the newly added printer and Select Options & Supplies… on the left

Printers
